PROFESSIONAL SUMMARY

Experienced Oracle Application Developer with strong expertise across the analysis, design, and development phases of enterprise applications. Proven ability to design and deliver robust technical solutions for Oracle Applications, including data conversions, inbound interfaces, and report development, ensuring scalable and maintainable implementations.

Hands-on experience in Oracle APEX (Application Express) with a focus on application enhancements, customizations, and XML Reports. Demonstrated capability in building modern, API-driven applications through effective implementation of REST APIs in Oracle APEX.

Highly proficient in SQL and PL/SQL, with extensive experience developing stored procedures, packages, and functions to support complex business logic and performance-optimized data processing.

CORE SKILLS

- **Oracle Technologies:** Oracle APEX, ORDS
- **Database & Programming:** SQL, PL/SQL, Stored Procedures, Packages, Functions, Triggers
- **Reporting:** XML Publisher (BI Publisher), Interactive Reports, Interactive Grid (IG), Dashboards
- **Enterprise Applications:** Oracle Applications Customization & Enhancements
- **Development Practices:** Requirement Analysis, Solution Design, Testing & Deployment
- **Version Control:** Git & GitHub

CORE COMPETENCIES

- Oracle APEX Development (1.5+ Years) | Workflow & Approval Mechanisms | Interactive Grids & Reports
- PL/SQL & SQL Optimization | Database Objects (Procedures, Packages, Functions, Triggers)
- ORDS
- Dynamic Dashboards & Forms | Interactive Reports | XML Publisher (BI Publisher)
- Performance Tuning & Debugging | Application Deployment & Maintenance
- Business Requirements Analysis | Stakeholder Collaboration | Problem-Solving

PROFESSIONAL EXPERIENCE

Oracle APEX Developer | Tavish Infotech PVT. LTD. | January 2025 – Present

As an Oracle APEX Developer Intern, I was involved in designing, developing, and maintaining low-code web applications using Oracle APEX for internal tools and client projects.

Responsibilities:

- **Application Development:** Built interactive, data-driven web applications using Oracle APEX, focusing on forms, reports, Interactive Grids, and dynamic UI components to enhance user experience and usability.
- **Workflow & Approvals:** Designed and implemented end-to-end workflows and approval processes in Oracle APEX, including role-based actions, status transitions, and business rule validations.

Oracle APEX Developer

- **Database & Business Logic:** Developed efficient and maintainable PL/SQL procedures, functions, packages, triggers, cursors, loops, and IF-ELSE logic and page processes to support front-end functionality, enforce business logic, and ensure data accuracy and performance.
- **Bulk Data Loading:** Implemented bulk data upload and validation processes using APEX Data Loading and custom PL/SQL logic, handling large datasets with proper validations, error handling, and performance optimization.
- **Custom Components:** Customized APEX regions, buttons, Dynamic Actions, validations, and plug-ins to meet specific business requirements and improve user interaction.
- **Capacity Management & Validations:** Developed logic to enforce row limits, capacity constraints, and validations within APEX pages using a combination of client-side JavaScript and server-side PL/SQL.
- **Integrations (ORDS & Payments):** Worked with basic ORDS RESTful services for application integrations and implemented payment gateway integration within APEX applications.
- **Role-Based Access & Security:** Built secure, role-based Oracle APEX applications with proper access control, user authorization schemes.
- **Debugging & Optimization:** Identified and resolved performance bottlenecks in SQL queries and APEX pages, improving load times, stability, and responsiveness.
- **Collaboration:** Collaborated closely with frontend designers, DBAs, and QA testers to deliver secure, scalable, and user-friendly enterprise applications within timelines.

KEY PROJECTS

1. Client – Aditya Birla group (IPRM - Procurement & Marketing Analytics)

Project Description:

Designed, developed, and deployed custom Oracle APEX applications to streamline data management, reporting, and decision-making for the iPRM - procurement and marketing divisions. The solution enabled real-time visibility into key business metrics, improved workflow automation, and enhanced operational efficiency.

Key Responsibilities & Contributions:

- Developed interactive dashboards, reports, and data entry forms to visualize critical business metrics including copper hedging, pricing analysis, and quantity summaries.
- Implemented PL/SQL-driven business logic to automate workflows, approval processes, and scheduled operations.
- Designed calendar-based and pivot-style reports using enterprise views such as PRMS_HEADINGS_SUMMARY_V and PRMS_EXCHANGE_CALENDAR to support real-time insights.
- Built and optimized Interactive Grids with conditional formatting, custom toolbars, validations, and controlled user updates.
- Designed and managed workflow-based approval mechanisms using APEX_WORKFLOW APIs with automated email notifications via APEX_MAIL.
- Implemented batch processing and CSP-type logic using complex PL/SQL packages and triggers to automate data transformations.
- Ensured application security, performance optimization, and responsive UI design using the Redwood Theme.

Technologies Used:

Oracle APEX, SQL, PL/SQL, ORDS, APEX_WORKFLOW, APEX_MAIL, Redwood Theme

Oracle APEX Developer

EDUCATION

Sal College Of Engineering | B.E(Information Technology) | 2021 – 2025

CERTIFICATIONS & RECOGNITION

- **Oracle APEX Cloud Developer Certified Professional** (Oracle University, October 2025)
